INTRODUCTION FEBRUARY 1983

To the reader:

The 1982 Primary and General Elections are now history, but as every student of history knows, our capacity to respond to the future depends on how well we understand the past.

This volume of election results for 1982 is the latest in a series of biennial publications of the office of the secretary of state, giving the official tallies for all congressional, statewide, county and legislative contests for the elections of the past year. As in 1980, this publication includes maps and other important election information which the researcher or reader may find useful.

The information within these covers can be most useful, even to the casual reader. Voting patterns can reveal so much about a town or a group of people, at election time, and help us discover who we are as a people, on the basis of which candidates we favor. The material in this booklet is a fertile field for inquiry by every citizen.

The volume is based on the official return of votes sent to the secretary of state following the Primary and General Elections by the various canvassing committees. In some cases our totals differ slightly from the totals in the state canvass reports prepared at the time of the elections, correcting discrepancies discovered as we prepared this publication.

For write-in votes, the word "scattering" is used, in lieu of separate listings for those candidacies. If you are interested in these figures, or in seeing the official election reports from each town, you're welcome to come in and look at them here.

Comments, as always, on this publication or other matters related to elections, are always appreciated.

Sincerely,

James H. Douglas

MEMORANDUM OF METHODOLOGY Jan 1983

This is the third time the results of the statewide elections have been produced by computer technology. This process provides additional analysis of the results, including percentages, as well as facilitating the production of the book.

The data are once again the product of the Uniform System of Election Recording (USER). This project is a comprehensive data system which customizes the numerous forms used in the election process. The system also allows for the expedited compilation of all returns using the polling place level data for all races on the consolidated state ballot.

As in the past, the data included in this book are aggregated to the town level with percentages in contested races. Indices are calculated at the county level to provide a quick form of general geographic analysis.

One of the improvements in this year's book is the enhancement to the computerized analytical maps. This year's maps are similar to those of 1980 except that the town boundaries are outlined to provide more specific geographic analysis.

The map program is again a product of the Graduate School of Design at Harvard University in Cambridge, Massachusetts. It was produced in cooperation with Andrew Wyckoff, now a Researcher/Programmer at the Brookings Institution in Washington, D.C.

The general election maps this year reflect the performance of U.S. Senator Robert T. Stafford (R) in 1982 and in his previous reelection in 1976. The Governor's race can easily be compared with the map in the 1980 book while the turnout map, reflecting the general election voter turnout as a percentage of those registered, is new.

As with previous editions of the elections book, this version was produced at the University of Vermont, Academic Computing Center. The computer system used was a DEC-system 2060 and ForTran was the predominant programming language. Our thanks to the staff at ACC for their able assistance.

Also, our graditude to James H. Douglas, Secretary of State, and his Executive Assistant, now Mrs. Cynthia Moulton Bensen, without whose valuable assistance this publication would not be possible.

Clark H. Bensen, Esq., Vermont Polidata

## VOTER STATISTICS

### PRIMARY ELECTION, SEPTEMBER 14, 1982

| | | | |
|---|---|---|---|
| Registered voters | | 305552 | |
| Actual voter turnout | | 76984 | 25.19% |

NOTES:

PrReg -- Voter registration based upon the number of citizens who are included on a checklist on file with their town or city clerk a certain number of days before the primary election.

PrAct -- The actual number of voters who showed at the polls on election day based upon the number of names checked on the checklists used at the polling places. This figure includes the number of voters who voted by absentee ballots as well.

PrAbs -- The actual number of absentee ballots counted on election day.

PrTO% -- Voter turnout based upon the percentage of voters registered to vote in this election who actually did show at the polls and cast a ballot.

%Rep -- An estimated percentage of the actual voters who cast ballots in the Republican Primary. This is based upon the highest vote total for all offices in the Primary.

%Dem -- An estimated percentage of the actual voters who cast ballots in the Democratic Primary.

%LU -- An estimated percentage of the actual voters who cast ballots in the Liberty Union Primary.

GnReg, GnAct, GnAbs, and GnTO% are used in the same manner as their counterparts explained above but for the general election rather than the primary.

%StReg-- The proportion of the total state registered voters generated by the unit listed, i.e., county or town, expressed as a percentage of the state total.

Reg Gain/Loss -- These last two columns list the voter registration for the immediately preceding general election with the gain or loss of registered voters listed as a percentage of the unit total for the preceding general election.

* Dem Towns -- There were 8 towns wherein the most ballots were cast in the Democratic Primary.

# MISCELLANEOUS NOTES ABOUT THE TABLES

**Clark H. Bensen**
**Vermont Polidata**

*Primary and General Election Tables*

a. These tables list the results for each race for every town and city in the state. They are arranged with one race per table except for the Uncontested Primaries table. Each begins with a subtable listing the statewide totals for every candidate. It also summarizes the extent of the support for the candidate. Note here that the maximum number of candidates for which a separate column will appear is six. If more than six are in the race, the last column will be an aggregation of the candidates who received the lowest totals. Note also that the order of the columns is Republican first, then Democratic or next highest total.

b. Towns Won—first, the number of towns/cities wherein the candidate received a plurality of the votes; second, the percentage of the total number of towns/cities (246) wherein a plurality was attained.

c. Min% Max%—the minimum (maximum) percentage achieved by the candidate in any town/city.

d. Asterisk (*)—indicates that the candidate achieved a plurality in that unit (i.e., state, county, town).

e. Percentage of State Totals—the percentage of the candidate's State Total obtained in each county; the same for the total votes cast for the office.

f. Index Comparing County Percentage to State Percentage—an index generated by dividing 1) the percentage of the county vote total obtained by the candidate, by 2) the percentage of the state vote total obtained by the candidate. For example, if a candidate were to have 51.8% of the vote in Caledonia County, but only 30.1% statewide, the index would be 1.72.

g. %Cty—the percentage of the total county vote for this office which this unit generates.

h. %State—the percentage of the total state vote for this office which this unit generates.

*Voter Statistics, Registration and Turnout Table*

a. This table lists the voter registration and turnout data for both the Primary and General Elections. It also lists some figures calculated for the Primary and compares the registration of the last General Election with the most recent.

b. Since municipalities with voting machines mean the breakdown of voters by primary is incomplete, an estimate is computed using the highest vote total for any office in the primary. This estimate is reflected in the percentage columns.

c. For other notes about this table, refer to the end of the county summary page thereof.

*Voter Participation Tables*

a. These tables give an indication of the participation by the voters in all the races on the ballot. The arrangement is first, one county summary table per primary and second, a similar table for the general.

b. Est. Blanks—this figure, in the state total section, is the difference between the total votes counted for the office and the total for the office which is determined to be the State High. The State High is the race in which the most votes were cast in the primary.

c. % St. High—the percentage of the total votes counted for the State High which were counted as votes for this office.

d. % St. Act.—the percentage of total Actual Voters (checked on polling place checklists has having entered to vote) which voted for any candidate for this office.

e. Average—the average of the number of votes is calculated first; the percentage of the State High, or State Actual, is computed from the Average.

*Party Participation Tables*

a. These tables are very similar in arrangement to the Voter Participation tables above except that they involve the general rather than primary election results.

b. State %—the percentage of the total statewide vote for the office which the party candidate received.

c. % Cand. Tot.—the percentage of the party candidate's statewide total vote obtained in this county.

d. Note here that there may be a blank column if there was a race in which the candidate ran on more than one party label, or there was not a candidate for the party involved, or if the party candidate had a total so small that it was aggregated with others.

*Election Maps*

a. These maps are analytical in nature and are generated by the computer software package called SYMAP developed at the Harvard University Graduate School of Design. The maps are unidimensional and use the results from one race for every town. Unless otherwise indicated, the town percentages are the data used.

b. The SYMAP program takes the percentage data from the 246 towns and plots the results on the map coordinate system using varying symbols indicating the intensity of support. As a rule, the darker the shading or symbolism, the more intense the support for the candidate in that geographic area. Note that since the map is a representation of geographic area, certain places, e.g., Burlington, will appear small on the map, seemingly out of proportion to the potential impact of the statewide vote.

c. The maps are standardized in their representation so that the symbolism of one map will generally represent the same value on another map. Basically they are indicators of percentages, as follows.

| *Interval* | *Percentage Range* |
|---|---|
| 1 | 0.0 — 34.9 |
| 2 | 35.0 — 42.4 |
| 3 | 42.5 — 49.9 |
| 4 | 50.0 — 57.4 |
| 5 | 57.5 — 64.9 |
| 6 | 65.0 — 100.0 |

Comparison between maps will indicate not only the differences in geographic areas of support but also the differences in the intensity thereof. Note, however, that the intensity is certain to be affected by the number of candidates in the race.

d. By the way, the vacant spaces on the maps indicate the geographic areas of Vermont's unorganized towns and gores. There are only 246 valid points plotted on each map, one for each town and city.

# Table 25.

CITIZENS PARTY

| | (Highest) | (Average) | President | US Senate | US House | Governor | Lt. Gov. | St. Trs. | Sec. St. | Auditor | Atty Genl |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Candidates | | | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 0 | 0 |
